

Dear GreenAngel Investors,

As mentioned in today's Business In Vancouver Magazine, one of GreenAngel Energy's (GAE:TSX.V) greentech startups, Paradigm Environmental Technologies, has gained a large contract with Metro Vancouver.

The Metro Vancouver regional district, which runs the Lower Mainland's sewage treatment facilities, will capture methane gas from waste treated at the Lulu Island plant in Richmond and sell it to natural gas company FortisBC.

The gas will be captured and purified using a technology called MicroSludge, which was developed by Vancouver-based Paradigm Environmental Technologies. It will cost Metro Vancouver \$13 million to put the technology in place. The project received funding from the provincial and federal governments.
